

V1: Agile Team

A streamlined tool giving smaller teams and teams new to Agile development everything they need to quickly and easily begin Agile planning, tracking and reporting.

V1: Agile Team is:

- Ideal for a small team or a team new to Agile software development
- Simple to use for planning and tracking releases and sprints
- Collaborative solution enabling teams, managers, product owners and stakeholders to easily work together
- Based on Scrum and XP methodologies
- Extensible via the VersionOne API/SDK and open-source reference integrations

Interactive "Getting Started" guide helps users get up-to-speed quickly

Key Features & Benefits

- Ensure "anytime visibility" into the project's status through a 100% web-based application that distributed team members, remote stakeholders or occasional users can access via a browser
- Increase development time and decrease reporting time by centralizing task, test and defect updates into a single system that reflects status changes, task estimates and test results
- Help team members quickly begin Agile development through tightly-integrated Agile project management workflows, simple Getting Started information and Burndown, Velocity, Trend and Daily Stand-up reporting capabilities
- Keep projects on time and stakeholders informed through interactive Taskboards and Testboards that show both the status of individual tasks and tests, as well as their step-by-step progress through the development and testing processes
- Expedite prioritizing, grouping and scheduling of backlog items for inclusion in a release or sprint through easy-to-use, single-item drag-and-drop or multi-item select options
- Quickly access real-time project information by eliminating the need for and time consumed by multiple manual tracking mechanisms including different spreadsheets, email, instant messaging, or other documents

Business Challenge

Your team is moving to an Agile development methodology to improve the quality and timeliness of software delivery. Yet, the spreadsheets, emails and homegrown time-tracking tools you've been using to manage project progress and report status information are cumbersome and time-consuming.

Even once you've finally gathered individual status reports from team members, you aren't confident in the accuracy or recency of the data. Worse yet, providing overall visibility in the form of project rollups to managers or other executive stakeholders has become an irregular or rare occurrence.

Business Needs

- Consolidate and review project status metrics and visuals in real-time, even from distributed team members
- Simplify and expedite individual team member reporting through a common, web-based, template-driven UI
- Deliver customized, accurate project reports to stakeholders showing relevant metrics with a single mouse click

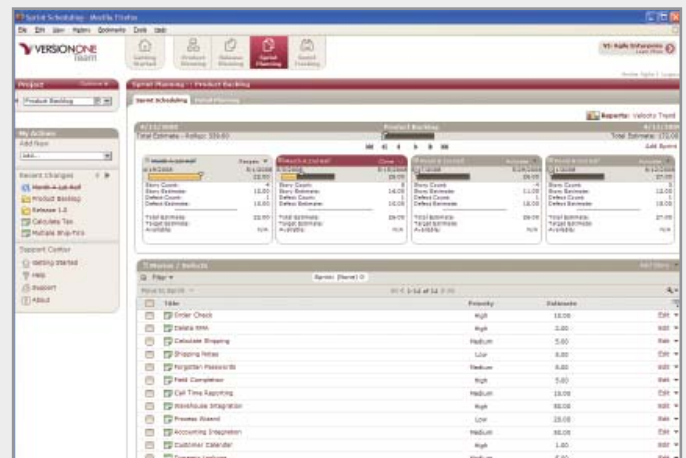

- Obtain up-to-date daily visibility into progress and remaining To Do's on projects, releases and iterations
- Provide team members quick visuals that reflect the overall state of stories, tasks, tests and defects including remaining open or unassigned items
- Capture, save and centrally-store project-related information previously developed or shared through spreadsheets, whiteboards or sticky notes for future reference by a distributed team

Our Solution

With *V1: Agile Team*, users no longer have to rely on spreadsheets, whiteboards or cardwalls to organize, plan, or track Agile software development projects. Instead, *V1: Agile Team* combines VersionOne's industry-leading Agile project management expertise with the needs of smaller teams or teams new to Agile. By focusing on core Agile concepts - team collaboration, continuous planning and incremental delivery - we've created a lightweight application with a straightforward workflow that enables Agile planning and tracking activities allowing new users get started quickly and easily.

V1: Agile Team helps you:

- Quickly import stories and defects from a spreadsheet and manage a consolidated product backlog
- Easily prioritize stories via simple drag-and-drop or multi-item select functionality
- Efficiently plan releases and sprints via an electronic whiteboard interface
- Consistently track releases and sprints through an interactive Taskboard, Testboard and Daily Scrum dashboard
- Automatically generate key Agile metrics such as Burndown, Velocity, Estimate trends (Burnup) and Cumulative Flow Reports for releases and sprints

Easy-to-use drag-n-drop and multi-select options simplify release and iteration planning

About VersionOne

VersionOne is recognized by Agile practitioners as the leader in Agile project management tools. Since 2002, we have helped more than 10,000 teams and 70,000 users in 50 countries from companies such as Adobe, BBC, Siemens, Disney, Dow Chemical, IBM, Lockheed Martin, Sony, 3M and Business Objects provide greater value to their customers by simplifying the process of planning and tracking Agile software projects.

System Requirements*

On-Demand (hosted)

- Browser - Internet Explorer 6.0, 7.0 or Mozilla Firefox 2.0, 3.0
- Operating System - Windows 98, 2000, XP
- Processor - 1 GHz
- Memory - 512 MB RAM

On-Site (local)

- Operating System - Windows 2003, 2008
- Web/Application Server - Internet Information Server (IIS) 6, or IIS 7 with ASP.Net installed
- Framework - Microsoft .NET 2.0 SP1
- Database - Microsoft SQLServer 2005, 2008
- Processor - 2 GHz
- Memory - 2 GB RAM

*V1: Agile Team is NOT compatible with V1: Agile Ideas.
